

Curriculum Vitae

PROFESSOR H.S. WHEATER

Name: Howard Simon Wheater

Date of Birth: 24.6.49

Nationality: British

Present Appointment: Canada Excellence Research Chair in Water Security and Director, Global Institute for Water Security, University of Saskatchewan, Canada
Distinguished Research Fellow and Emeritus Professor of Hydrology, Imperial College London

Degrees:

Ph.D.	University of Bristol	1977
M.A.	University of Cambridge	1974
B.A.	(1st Class Honours) Engineering Science University of Cambridge	1971

Awards:

University of Saskatchewan Distinguished Researcher	2017
Prince Sultan bin Abdul Aziz International Water Prize	2006
Institution of Civil Engineers Baker Medal	2004
British Hydrological Society President's Prize	1996
Institution of Civil Engineers Overseas Premium	1984
Senior Scholarship, Queens' College, Cambridge	1971
Entrance Exhibition, Queens' College, Cambridge	1968
Rolls-Royce Industrial Scholarship	1968

Membership of Professional Bodies and Learned Societies:

Honorary Member, British Hydrological Society	2011
Fellow, American Geophysical Union	2010
Fellow, Royal Academy of Engineering (FREng)	2003
Life Member, International Water Academy (Oslo)	1999
Fellow, Institution of Civil Engineers (C.Eng, FICE) (Member 1978)	1999
Member, British Hydrological Society	1983

Appointments:

2010-

University of Saskatchewan, Canada
Canada Excellence Research Chair in Water Security
Director, Global Institute for Water Security

1978-2010

Imperial College of Science, Technology & Medicine

2008-2009

Director, Imperial College Environment Forum

1995-2008

Head, Environmental and Water Resource Engineering

1993-2010

Professor of Hydrology

1990-1993

Reader in Engineering Hydrology, Department of Civil Engineering

1987-1990

Senior Lecturer in Engineering Hydrology, Department of Civil Engineering

1978-1987

Lecturer in Engineering Hydrology, Department of Civil Engineering

1972-1978

University of Bristol, Department of Civil Engineering

1976-1978

Research Associate

Integration of tidal power within the UK electricity generating network (SERC).

1975-1976 Research Assistant
Regional analysis of rainfall-runoff relations. Effects of urbanization on flood runoff (Water Research Centre).

1972-1975 Research Assistant
Research into catchment hydrology, physical simulation of hydrological processes, rainfall-runoff simulation techniques for flood management.

1968-1972 **Rolls-Royce Ltd (Aero Engine Division).**
Engineering apprenticeship, Fluid Mechanics research.

Current/Recent Research Grants & Contracts:

Global Water Futures – Canada First Research Excellence Fund 2016-2023, CAD \$77.8 million

Grants and Contributions – Environment Canada 2015-2017, CAD \$528,772

Canadian Water Network – Water Knowledge Application Network (WatKAN), 2013 – 2015, CAD \$2,850

Changing Cold Regions Network - Natural Sciences and Engineering Research Council of Canada – Climate Change and Atmospheric Research 2013 – 2018, CAD \$5 million

Canada Foundation for Innovation – Leaders Opportunity Fund (CERC) 2012, CAD \$800,000

Grants and Contributions – Environment Canada 2011-2016, CAD \$475,000

Canadian Water Network – Tobacco Creek Watershed, 2012-2014, CAD \$128,313

Grants and Contributions – Environment Canada 2011, CAD \$70,000

Science in Society – Connections and Intersections Award, University of Saskatchewan 2011, CAD \$30,000

Hydrological Extremes and feedbacks in the changing water cycle, Changing Water Cycle, Natural Environment Research Council (UK) 2011-2014, £1.06 million

Canada Excellence Research Chair in Water Security
Canadian Government, Province of Saskatchewan, University of Saskatchewan 2010-2017, CAD \$30 million

Knowledge and Information Community for Climate Change
European Institute of Technology 2010-2013 Euro 90 million

Radionuclide transport in vegetated soils
UK Nirex/ANDRA 1988-2007, £3.5 million

Initiated £10 million NERC LOCAR Thematic Programme
National Infrastructure for Catchment Hydrology Experiments (NICHE)/Lowland Catchment Research (LOCAR)
Joint Infrastructure Fund 1999-2004, £2 million

Hydrogeochemical functioning of lowland permeable catchments: from process understanding to environmental management
NERC/Environment Agency 2002-2006, £500k

Generation of spatially-consistent rainfall data,
DEFRA 2003-2006, £680K

Spatial-temporal rainfall modelling with climate change scenarios
DEFRA 2003-2006, £154K

EPSRC Flood Risk Management Research Consortium, co-PI (£5.6 million Phase1, £8.5 million Phase2)

Land use management research, EPSRC Flood Risk Management Research Consortium, 2004-2008, £720k; 2008-2011 £525k; NERC FREE £175k

Modelling groundwater flood risk from extreme events
NERC FREE thematic programme, 2007-2010, approx £600k

Research training: 65 PhD students, approximately 103 MSc projects (past and present)

University of Saskatchewan (UofS) Administration:

Director, Global Water Futures Programme, 2016-
(responsible for conception, development and management of a CAD \$77.8 million research programme)
Canada Excellence Research Chair in Water Security, 2010-
(responsible for conception, development and management of a CAD \$30 million research programme)
Director, Global Institute for Water Security, 2011-
(founding Director, responsible for leadership of UofS signature area)
Member, Tenure and Renewals Committee, School of Environment and Sustainability, 2010-
Member, Promotions Committee, School of Environment and Sustainability, 2010-
Member, Search Subcommittee for Sustainability Science faculty post, School of Environment and Sustainability, UofS, 2013
Member, Search Committee for seven faculty posts associated with Canada Excellence Research Chair in Water Security, 2011-2014
Chair, Search Subcommittee for each of seven faculty posts associated with Canada Excellence Research Chair in Water Security, 2011-2014
Member, Search Committee for Executive Director, School of Environment and Sustainability, 2011
Member, Search Committee for Canada Research Chair, School of Public Policy, 2011
Member, School of Environment and Sustainability Renewals and Tenure Committee, 2013
Member, School of Environment and Sustainability Promotions Committee, 2013
Member, Search Sub-committee, Faculty Position in Municipal/Environmental Engineering, Department of Civil and Geological Engineering

Imperial College Administration:

Department of Civil & Environmental Engineering
Director, Imperial College Environment Forum, 2008-2009
Head, Environmental & Water Resource Engineering Section, 1995-2008 (13 academic staff, 45 researchers, 65 MSc students)
Member, Departmental Management Committee, 1995-2008
Chairman, Departmental Examiners' Board, 2005-2008
Director, Engineering Hydrology MSc/DIC Course 1984-2006
Chair, Departmental Research Committee 2001-2005
Member, Grantham Institute for Climate Change Executive Group College, 2008-2010
Founder, College ENTRUST Panel
Member, various College research centres and initiatives

Learned Society Activities, UK, Canadian and International Scientific Administration:

British Hydrological Society
President 1999-2001
Chairman, Southern Section, 1984-1996
Chairman, Research Sub-Committee, 1994-1999
Chairman, Scientific Programme Committee, Intl Conf on Hydrology in a Changing Environment, Exeter, 1998
Chairman, Intl Conf on Hydrology, Science and practice for the 21st century, Imperial College London, 2004
Chartered Institute of Water and Environmental Management
Member, Water Resources Panel, 1999-2001
Institution of Civil Engineers
Member, Water Board, 1999-2001
Member, Reservoir Safety Advisory Panel, 2000-2006

HYDRA Water Sciences Consortium (Universities of Oxford, Reading, Imperial, University College London, Queen Mary University, Centre for Ecology and Hydrology, British Geological Survey)

Founding Chair 2007-2010

Natural Environment Research Council

Chairman, Land & Water Resources Review Panel, Centre for Ecology and Hydrology, 1996-2003

Member, CEH Programme Development Group, 2003-

Chairman, LOCAR Working Group, 1998-1999 (initiated £10million national research programme)

Member, Freshwater Sciences Research Grants & Training Awards Committee, 1993-7

Member, HYREX Programme Committee, 1992-1996

Member, Environmental Diagnostics Programme Committee, 1995-2000

Member, LOCAR Programme Committee, 1999-2006

Member, FREE Ad-hoc steering group, 2002-2004

Ministry of Agriculture, Fisheries and Food

Member, Flood Estimation Handbook Advisory Committee, 1994-1999

Environment Agency of England and Wales

Member, Flood Warning and Management

R&D Advisory Group, 1999-2001

Member, Scientific Advisory Panel, 2004

Member, Nitrate Vulnerability Assessment Advisory Panel 2006

Reviewer, Catchment Flood Management Plans, 2007-2008

Member, Climate change and flood risk impacts assessment project steering group, 2008-2010

Member, Science advisory panel for catchment science research, 2009

Department of Environment, Food and Rural Affairs/EA Broad Scale Modelling Thematic Advisory Group 2000-2005

Chair, Criteria Review Panel (development of guidelines for exclusion criteria for the siting of a subsurface repository for high and intermediate level nuclear waste) 2007-2008

Member, Extreme rainfall research project steering group, 2007-2009

Department of Innovation Universities and Skills, Land Use Foresight Panel

Member, 2008-2010

UNESCO

Member, International Hydrological Programme Advisory Panel, 2002-

Chair, G-WADI Steering Committee, 2002-

Reviewer, Flemish Government Trust Fund

Member, UNESCO Mission to Sudan, 2007

Prince Sultan bin Abdulaziz International Prize for Water, Council member, 2007-World Climate Research Programme

Vice-chairman, Global Energy and Water Exchanges (GEWEX)

Scientific Steering Committee (JSC), March 2010 – December 2013

Member, Global Energy and Water Exchanges (GEWEX) Scientific Steering Committee (JSC), January 2014 – December 2014

Scientific Advisor to the Ministry of Foreign Affairs, Republic of Hungary with respect to the Gabčíkovo-Nagymaros Barrage System (GNBS) case and Counsel and Advocate for Hungary, at the International Court of Justice, The Hague, 1993-97

Consultant to the State of Nevada, USA concerning a proposed US Department of Environment licence application for a nuclear waste repository at Yucca Mountain, 2003-

Scientific Advisor to the Republic of Argentina with respect to environmental impacts of proposed industrial developments on R Uruguay water quality at the International Court of Justice, The Hague, 2006-2010

Member, International Court of Arbitration for the Indus Waters Treaty, The Hague, 2010-2013

Member, Standing Committee for International Activities, Royal Academy of Engineering, 2010-2013
Member, Provincial Environmental Monitoring Panel, Alberta Environment, 2011
Chair, Council of Canadian Academies Expert Panel on Sustainable Management of Water in the Agricultural Landscapes of Canada, 2011-2013
Member, Board of Directors, Sylvia Fedoruk Canadian Centre for Nuclear Innovation, 2011 – 2014
Member, Water Partner Advisory Committee to the Council of the Federation Water Stewardship Council, 2011-
Member, International Advisory Committee, Heihe Watershed Allied Telemetry Experimental Research (HiWATER) Team, China, 2012-
Member, Advisory Committee, Canadian Agri-Food Policy Institute (CAPI), 2013-2014
Expert Consultant to the Republic of Chile concerning a water conflict between Chile and Bolivia, 2016-
Committee Member, The National Academies of Sciences, Engineering and Medicine Committee on Future Water Resource Needs for the Nation: Water Science at Research at the U.S. Geological Survey, 2017-

Editorial Activities:

International Board of Advisers, ASCE Journal of Hydrologic Engineering, 2004-
Editor, Nordic Hydrology 2003-2007
Editor, Hydrology Research, 2007-
Editor, Progress in Environmental Science, 1998-2001
Editor, Environment International, 2001-2008
Reviewer for: Proc. Roy. Soc., Water Resources Research, Geophysical Research Letters, J. Hydrology, J. Hydrological Processes, Hydr. Sci. Jnl., HESS, Hydrology Research, Nordic Hydrology, Advances in Water Resources, Forestry Journal, Flood Risk Management Journal, Environ Modelling and Software, Geotechnique, Hydrogeology Journal, Proc. Instn. Civil Engrs, CIWEM journal, Land Use Policy, etc.
Associate Editor, Journal of Science in Cold and Arid Regions
Consulting Editor, Editorial Board, Global Challenges (Water), 2015-

External Examining & Assessment:

Referee: Stockholm Water Prize
Professorial Appointments: Elector, University of Cambridge; University of Tufts, USA, University of Wales, University of Arizona, USA, University of California, Irvine, USA, Trinity College Dublin, University of Aberdeen, University of Bristol
Academic Appointments/Promotions: University of Edinburgh, Heriot Watt University, Cranfield University, Sheffield University, Newcastle University, Technical University of Denmark, Catholic University of Leuven, Belgium, University of Khartoum, University of Jordan, University of Riyadh, Khumasi University, Ghana, University of Botswana, Institute of Hydrology/Centre for Ecology and Hydrology, Wallingford, Macaulay Institute, Aberdeen.
DSc: Universities of Bristol, Birmingham
PhD: Universities of Bradford, Bristol, Birmingham, Lancaster, London, Melbourne, Newcastle, Reading, Salford, Southampton, Woollangong
External Examiner, University of the West Indies Department of Civil Engineering, 2001-2007
External Examiner, National University of Ireland, Galway, Department of Engineering Hydrology, 2005-2008
External Examiner, University of Bristol, 2006-2009
Review Panel, Danish Technical University, Department of Environmental Engineering, 2007
Review Panel, Predictions Under Change - for US National Science Foundation,

2011
 Review Panel, ETH Zurich, Department of Civil, Environmental and Geomatic Engineering, 2012
 External Reviewer, University of Melbourne, Department of Infrastructure Development, 2012.
 External Evaluator, University of Zurich, Department of Geography, 2013
 Chair, Site Visit Committee, Natural Sciences and Engineering Research Council Evaluation of David Barber Collaborative Research and Development Grant at the University of Manitoba, Winnipeg, 2014
 Research Grant Assessment: NERC, EPSRC, MAFF, British Council, Leverhulme Foundation, Royal Society, NOAA (USA), Swiss National Science Foundation, Austrian Science Fund, US-Israel BSF, etc.
 External Examiner, Oxford University Centre for the Environment, 2015
 External Examiner, University of New South Wales, Department of Civil and Environmental Engineering, 2016
 External Examiner, University of Melbourne, 2016
 External Examiner, The University of the West Indies, Faculty of Engineering, 2016-

Overseas Development:

Overseas lecture courses given include:

1979-1984	University College, Galway, Eire, International Hydrology MSc course
1982	University of Dar-es-Salaam, ANSTI/UNESCO International Hydrology MSc
1984	Catholic University of Chile, Santiago, Hydrology short course
1986	CETESB, Sao Paulo, Brazil, Hydrology & Water Quality short course
1990	Tsinghua University, Beijing, China, Water Quality lectures
1998	UNESCO Workshop, Amman, Jordan, Wadi Hydrology
2005	Chair and Organiser, G-WADI International Workshop on Hydrological Modelling of Arid and Semi-Arid Areas, Roorkee, India
2006	UNESCO/ICARDA workshop on rainwater harvesting, Aleppo, Syria
2006	International Conference on Dryland Management, Tunis
2007	Chair and Organiser, G-WADI International Workshop on Groundwater Modelling in Arid and Semi-Arid Areas, Lanzhou, China
2008	UNESCO workshop, Arid Zone Water Resources Management, Santiago, Chile
2009	International Workshop on Arid Zone Water Resources Management under Climate Change, Trieste, Italy
2009	UNESCO workshop on Arid Zone Water Resources, Amman, Jordan

Recent Invited Lectures:

UNESCO Arab Region, IHP Workshops, Beirut (1999); American Geophysical Union Fall Meeting, San Francisco (1999); Intl Water & Energy Conference, Las Vegas (2000); Intl Arid Zone Hydrology Conference, Cairo (2000); Starker Lecturer, Oregon State University (2000); American Geophysical Union Fall Meeting, San Francisco (2002); Kyoto Water Summit (2003), International Conference of Water Resources in Arid and Semi-Arid Regions, Muscat (2007), International Conference on Developments in Water Resource Management, Malaysia (2009), International Council of Academies of Engineering and Technological Sciences, CAETS, Calgary (2009); American Geophysical Union Fall Meeting, San Francisco (2009); International Association of Hydrological Sciences – Putting PUB into Practice (2011); Canada-Israel Innovation Workshop, Ottawa (2011); Collaboration on Agri-Environmental Issues Dialogue, Ottawa (2011); International Statistics Institute's World Statistics Congress, Dublin (2011); American Association for the Advancement of Science (2012), Water Security, Risk & Society – International Water Security Conference, Oxford (2012); American Geophysical Union Fall Meeting, San Francisco (2012); Shared Waters-Shared Responsibility: Working across Borders to Protect and Restore Lake Winnipeg and the Red River Basin, Minneapolis (2012); Uni (2013); Plenary Address – Joint Scientific Congress (CMOS, CGU, CWRA), Saskatoon, Saskatchewan (2013); Gordon Research Conference, New Hampshire (2013);

Saskatchewan Ministry of Agriculture, Regina, Saskatchewan (2013); American Geophysical Union Fall Meeting, San Francisco (2013); Prairie Provinces Water Board – Saskatoon, Saskatchewan (2014); Canadian Society of Petroleum Technologists - Technical Luncheon, Calgary (2014); Mackenzie River Basin Board, Saskatoon, Saskatchewan (2014); UNESCO Kovacs Colloquium, Paris (2014), Prairie Provinces Water Board Water Quality Committee, Saskatoon, Saskatchewan (2014), Partners FOR the Saskatchewan River Basin, Saskatoon, SK (2014), Pasadena City College (2014); American Geophysical Union Fall Meeting, San Francisco (2014); Centre for Ecology and Hydrology, Wallingford, UK (2015); University of Queensland, Brisbane, Queensland (2015); Plenary Address - International Congress on Modelling and Simulation, Broadbeach, Queensland (2015); Australian Energy and Water Exchange Research Initiative, Broadbeach, Queensland (2015); Saskatchewan Irrigation Projects Association – Annual Irrigation Conference, Moose Jaw, Saskatchewan (2015); American Geophysical Union Fall Meeting, San Francisco (2015); Environment Canada Seminar Series, Burlington, Ontario (2016); Globe 2016 – Vancouver (2016); FSIN Water Regulations Forum, Saskatoon, Saskatchewan (2016); International Court of Justice 70th Anniversary Celebration, The Hague, Netherlands (2016); Canadian Network for Regional Climate and Weather Processes Annual Science Meeting, Montreal, Quebec (2016); Young Hydrologic Workshop – CGU/CMOS 2016, Fredericton, New Brunswick (2016); Eric Wood Symposium, Princeton University, Princeton, New Jersey (2016); 2016 Orlob Symposium, UC Davis, California (2016); 2016 Schultz Oration, Flinders University, Adelaide, Australia (2016); CUAHSI 2016 Biennial Colloquium, Shepherdstown, West Virginia (2016). The Global Network on Water and Development Information for Arid Lands (G-WADI) Global Conference, Beijing, China (2016); Canadian Water Resources Association 2016 Webinar Series, via webinar (2016); American Geophysical Union Fall Meeting, San Francisco (2016); Canadian Water Resources Association Climate Extremes: National Collaboration on Floods and Droughts Workshop, Ottawa (2017); 2017 CMOS Congress, Toronto (2017); 70th Annual CWRA Conference, Lethbridge (2017).

Principal Areas of Expertise:

Canada Excellence Research Chair Programme

Climate Change and Water Security

Understanding the impacts of a changing climate on water resources is an area of global concern, particularly in climates such as Western Canada where the cold region, semi-arid climate creates a hydrological system that is extremely vulnerable to climate change and can be profoundly affected by temperature and precipitation variability. Research by interdisciplinary sub-groups at key sites across the Saskatchewan River Basin is contributing to the development of modelling systems to better understand climate change effects on water security and to improve management practices to adapt to challenges associated with too much or too little water.

Objectives of this research include: improve understanding of interactions between terrestrial ecosystems and atmospheric processes, and impacts of climate variability on water-related ecosystem functions; improve quality of global/regional climate models and enable better downscaling for water-related climate change impacts assessment; improve assessment of water supply and quality variability, including climate change impacts; and enable policy development by commercializing new decision support tools for water security analysis.

Land-Water Management and Environmental Change

There is a demand for increased knowledge regarding the impact of activities on the land upon water quality and quantity. For example, it is important to understand how agriculture management practices and urban water management affect water quality and the movement of water through a

watershed. Research in this area is examining: effects of agricultural management on hydrological function, discharges and connectivity to the river system; impacts of agricultural and urban water management (impact of nutrients, pathogens, and pharmaceutical products on water quality); lake biogeochemical processes (ecosystem sensitivity to climate variability and pollutant stress); and development of feasible policy interventions and associated lake water quality and ecosystem responses.

Objectives of this research include: improvement of agriculture land-water management by understanding the effects of multiple stressors on water quality/quantity in watersheds; development of water quality modelling tools by understanding interactions between hydrology, water quality and aquatic ecology of research sites; and development of new decision support tools for management and remediation of diffuse pollution (mitigating impacts on aquatic ecosystem health).

Sustainable Development of Natural Resources

Sustainable use and protection of water resources is a pressing challenge amidst natural resource development in areas including the energy sector, mining and forestry. Inter-disciplinary science and creative partnerships between government, universities and industry will be crucial to the delivery of tools required for effective management and environmental protection of watersheds. Areas such as the Alberta Athabasca oil sands represent a complex combination of scientific, technical and societal challenges. Through research in this and other areas, the opportunity exists to develop new science and management practices which could change water use and land and water reclamation, not just in the oil sands, but in other mining operations.

Objectives of this research include: development of new assessment and remediation technologies by understanding interactions between ecotoxins, the hydrological cycle and wetland ecology; better understanding of ecological and human toxicity of oil sands pollutants by integrating pollutant assessments across terrestrial and aquatic ecosystems, development of integrated decision-support tools for risk assessment and remediation of contaminated land and water based on understanding of how pollutants biodegrade and how they are sequestered; and examination of potential for development of extraction and processing technologies that have a reduced environmental footprint.

Socio-hydrology

The new discipline of Socio-hydrology views water management as a complex human-environmental system. It is concerned with the ability of water systems to meet changing human and environmental needs, integrating humans and their activities into water science and ensuring water decision-making incorporates a range of values and perspectives about the meaning, value and use of water.

Socio-hydrology recognizes that many of the current stresses on water systems stem from social factors such as demography, the global economy, changing societal values and norms, technological innovation, laws and customs, and financial markets. It also acknowledges that the inability of many water systems to adjust to change is because of outdated governance, institutional rigidity, and failure to adequately perceive threats to water security, ill-functioning markets, and undue focus on physical at the expense of social change. It combines social science interests in human values, markets, social organizations and political institutions with the traditional focus of water science on climate and hydrology.

Increasingly, it is recognized that some of the most critical vulnerabilities in contemporary water systems lie at the intersection between human activities and physical systems, such as when governance systems are incapable of dealing with climate-induced changes in water supply

Socio-hydrology also incorporates research into the process by translating traditional scientific information into tools for water decision making. These processes are inherently social and value-based. They depend upon the way various water stakeholders (e.g. municipalities, farmers, mining companies, environmental groups, Aboriginal Peoples) define the problem of water security and the values they place on different aspects of it: its reliability, quality, cost, and ability to meet environmental needs. Socio-hydrology is at the forefront of efforts to establish and study participatory processes for decision making in the water sector.

Objectives of this research include: build better relationships with stakeholder communities to develop a common understanding of values and what each identify as threats to water security; understand divergent perspectives and the major driving forces for future insecurity; assess social and natural science questions deemed important by stakeholder community and draw on local knowledge to inform research; study societal response to water stress and to economic and policy instruments; and inform policy options to address water uncertainty and impediments to effective water governance.

Rainfall modelling and climate change studies

Stochastic models of rainfall have been developed for various applications with support from NERC and DEFRA. Poisson-process based single site models have been developed for UK and US applications, including regional UK application in conjunction with continuous simulation rainfall-runoff modelling for flood design and management. A suite of models for spatial rainfall analysis and spatial-temporal simulation has been developed for UK government, ranging from radar-based continuous space-continuous time methods to Generalised Linear Modelling of daily rainfall including both temporal and spatial non-stationarity. Applications include modelling impacts of climate variability on flooding in W. Ireland, next-generation rainfall-runoff modelling for UK flood practice, rainfall-runoff modelling for Iran, land use change in the Upper Nile. Recent developments include the development of GLMs for statistical downscaling of GCM and RCM climate change scenarios, providing spatial fields of precipitation and evaporations for impacts assessment. Applications include UK and Southern Africa flood and water resources assessment.

Prof Wheeler currently leads on water for Imperial's Grantham Institute for Climate Change, and advises British Energy on climate change impacts assessment.

Unsaturated zone and groundwater hydrology

Extensive research has been undertaken into modelling of unsaturated flow and solute transport, and the soil-plant-atmosphere continuum. A major (20 year) research contract with UK Nirex Ltd. involved lysimeter experiments of radionuclide transport in soils and vegetation uptake, and the integrated modelling of these processes for safety assessment of radioactive waste management. 1, 2 and 3D models have been developed, including redox-dependent geochemical interactions and the representation of uncertainty. The research has been summarised in a recent book.

Research over the last 10 years has focussed on the Chalk of southern England. A £10 million Thematic Research Programme was initiated, including a £2million infrastructure grant to Imperial, to support national research into groundwater-dominated catchments. Research has included the development of experimental and modelling research to represent flow and transport in the fractured porous medium of the Chalk unsaturated zone, including diffuse pollution (nitrate transport). Current research is focussing on the response to hydrological

extremes – a major project is funded under the NERC Flood Risk from Extreme Events programme, to develop tools for groundwater flood risk assessment, and parallel research is investigating the role of the deep unsaturated zone in supporting river flows under drought conditions, linked to climate change scenarios.

Research in groundwater contaminant transport has included numerical methods for advectively-dominated contaminant transport, field and modelling studies of saline intrusion, field and laboratory studies of non-aqueous phase liquids in groundwater, laboratory and numerical modelling of microbial de-nitrification processes, and modelling of chemically-reactive contaminant transport. A recent EPSRC/BG project has investigated microbial degradation of organic pollutants at a Gas works site and developing models for coupled flow, transport, geochemical interactions and microbial degradation. Other research is developing a framework for uncertainty analysis for well protection zones and investigating the value of data in risk reduction.

Groundwater recharge studies include UK applications and research into surface water/groundwater interactions in ephemeral flow systems, in Saudi Arabia, Oman, Botswana and the USA.

Recent consultancy includes advice to British Nuclear Fuels Ltd. on hydrological, hydrogeological and groundwater modelling studies at the Drigg nuclear repository, Cumbria and a study of Karst groundwater flooding in the Irish Republic. Currently Prof Wheeler is a consultant to the State of Nevada concerning safety assessment of a proposed high level nuclear waste repository at Yucca Mountain. He has also recently advised UK government on siting criteria for a deep nuclear waste repository.

Rainfall-runoff modelling, flood hydrology and urban hydrology

Major flood investigations have been carried out for the Water Research Centre, Severn-Trent Water, Thames Water, the Basque Regional Government, the Oman Government and numerous consultants. UK studies have included urbanisation effects, with respect to a new town development in Hampshire. New point and spatial rainfall modelling methods have been developed for continuous simulation modelling with NERC and MAFF/DEFRA support.

A suite of MATLAB-based rainfall-runoff modelling software tools has been developed for rainfall-runoff modelling, recently extended from lumped to semi-distributed models; the toolbox has had wide international uptake. A major effort has gone into model regionalisation studies for ungauged catchment rainfall-runoff modelling, with application to the UK, USA and Southern Africa; a book on this work has been popular; a second edition has been requested and is in preparation.

A study of Karst flooding problems in W. Ireland has included analysis of non-stationarity in rainfall (Southern Water, on behalf of Irish Govt.).

Prof. Wheeler is currently leading a national programme of research on land use impacts on flooding as part of a £15million EPSRC research programme, co-sponsored by NERC, DEFRA, the EA, Scottish Executive, Northern Ireland Rivers Authority, An extensive multi-scale hydrological experiment has been developed in Wales, working with a cooperative of farmers, to investigate effects of land use intensification on flood response at plot, hillslope and catchment scales, and new modelling tools have been developed to address the upscaling problem, based on detailed physics-based models and meta-modelling. This work has been integrated with sediment and water quality research, and with social analysis and the development of decision support visualisation tools.

Research on groundwater flooding is underway under the NERC FREE (Flood Risk from Extreme Events) programme.

Surface water quality

Water quality research overseas has included development of integrated river and lake water quality models for decision support for pollution control in China (EU, in collaboration with Tsinghua University, Beijing and Suez Lyonnaise-des-Eaux), and advice to the Republic of Hungary concerning the water quality impacts of the Gabčíkovo-Nagymaros Barrage system. Recent UK research funded by NERC and the Environment Agency of England and Wales focussed on the development of decision support models of nutrients for lowland catchment management, including diffuse and point source loads and in-stream processes. A recent EU contract has developed modelling systems for nutrient response of the Wash catchments in Eastern England, as a pre-pilot study for the EU Water Framework Directive. Earlier research into hydrology and water quality in upland Britain has addressed surface water acidification (Royal Society funding (in collaboration with Norwegian and Swedish Academies of Science) and NERC (Environmental Diagnostics) support). Published research includes field process and modelling studies.

UK water resource management

A major (£10million) national initiative (LOCAR) has been developed to study lowland permeable catchments, including a £2million infrastructure grant to Imperial College. A principle focus is to improve interdisciplinary science to support integrated water resources management of the UK's major aquifers, the Chalk and the Triassic Sandstone Three catchments have been instrumented in detail to monitor hydrological fluxes and water quality, including special instrumentation to investigate aquifer properties and stream-aquifer interactions. A £500k grant from NERC and the Environment Agency is focussing on the development of decision support modelling tools for nutrient management. See also surface water quality.

Recent research on water resource systems sponsored by Thames Water has focussed on new methods of assessment of risk and uncertainty in water resources management. This work was awarded the ICE Baker Medal in 2004.

Arid zone hydrology and water resource development

Major projects include:- Northern Oman Flood Study (1981) (Principal Investigator) and Five Wadis Study, S.W. Saudi Arabia (1985-88) (Senior Expert) in addition to numerous smaller-scale flood and water resource studies in the Middle East and Africa (Yemen, Jordan, Oman, UAE, Botswana). Published research includes rainfall analysis and simulation, rainfall-runoff modelling, groundwater recharge management. Recent research includes sustainable development of alluvial groundwater (Botswana), stochastic spatial-temporal rainfall modelling and rainfall-runoff processes (Iran), climate change impacts on water resources (Botswana) Flood Hydrology (Oman). Currently Chair of the UNESCO G-WADI programme, which seeks to disseminate state-of-the-art hydrology and water resources management practice for arid and semi-arid areas. Prof Wheeler was recently awarded the Prince Sultan bin Abdulaziz International Prize for Water for his arid zone work.

Large-scale hydrological modelling

Research into improved hydrological modelling for global climate models has included new methods for disaggregation of spatial rainfall and evaluation of SVAT schemes at point and catchment scale, contributing to the NERC TIGER programme and the GCIP study of the Mississippi. Recent research in collaboration with the Hadley Centre has focussed on improved GCM modelling of the Nile, including representation of lakes and wetlands, and the assimilation

of surface hydrological observations. Prof. Wheater has recently been appointed to the World Climate Research Programme GEWEX steering committee.
